

# Sprint 1 Report

Product Name: Run & Track

Team Name: Running Man

07/08/19

**Actions to stop doing:** We keep on having meeting often, so we are clear about what each other is doing and everyone is willing to do their allocated mission. So we are satisfied with our current progress.

**Actions to start doing:** We should start keeping a list of all required write-ups and documents that are expected to be finished by the end of each sprint, because this will make it easier to organize and allocate tasks. This section is short, because we feel that we are all on a similar page and moving forward with the project together.

**Actions to keep doing:** The team should keep doing multiple weekly meetings, because we are all more informed on the parts of the project we need to complete each day and each week. The team should continue to communicate often via multiple mediums like text, verbal communication, discord meetings, etc. because it keeps the whole team moving together.

**Work completed/not completed:** The user stories that are completed in this sprint are (1) As a user, I want an interface that I can easily interact with, (2) As a user, I want a custom profile so my calories calculated is accurate, and (3) As a runner, I want to keep track of how much time I spent per run.

**Work completion rate:** The team completed 23 story points in the first sprint. There were 7 days in this sprint. It took each of us about 2 hours in order to learn and setup android studio environment and github. Then the UI layout and timer each took between 4-5 hours. The logo took about 1 hour to design. The profile picture took about 5-6 hours of work to design, create, and code. The collaborative team meetings we held during the week took about 10 hours as we met 3 times a week. We also did tri-weekly scrum meetings which each took 15 minutes which comes out to 45 minutes each week. Each day we each worked about 3 hours per day on average and completed about 1 user story every other day. Ideal hours we spend working the entire sprint was about 20 hours, but the actual was about 25 hours.
